

LEED – Building Design Instruction – Project Management

LEED training (leadership in energy and environment design) is the newest way to grow your job opportunities. Many new positions are available in the Green industry. This industry is one of the top growing industries in spite of the economy shifts that have taken place in the last few years. Through LEED training contractors are given the opportunity to develop skills to provide Green services to the community. There are many governmental contracting positions available as well. This training opens many doors of opportunities up for new employment. LEED training is a requirement in order to become LEED certified.

LEED training has five focuses which are on energy efficiency, materials selection, indoor environmental quality, sustainable site development, and water savings. Green training is beneficial for anyone looking for a new opportunity in the work field. The green industry offers a new field of potential employment as well as business opportunities. LEED certification provides contractors with an open door to new construction opportunities.
